Deciduous Forest Biome. (2003, January 1). Retrieved December 10, 2014, from <http://www.thewildclassroom.com/biomes/deciduousforest.html>

Deciduous Forest— Vegetation

Range of temperature and precipitation.

Where rainfall is “broadly distributed throughout the year, deciduous trees mix with species of evergreens.” Examples- oak, beech, birch, maple.

“Many species of plants, lichens, fungi, and invertebrates depend on late-successional forests.”

"Tundra." UXL Encyclopedia of Biomes. Ed. Marlene Weigel. Detroit: UXL, 2011. Science in Context. Web. 10 Dec. 2014.

Two types of Tundra:

1- Arctic

- Polar climate, far from equator, “deep layer of permanently frozen ground called permafrost,” fewer than 18 inches of soil thaws during summer

2- Alpine

- Tops of mountains above timberline, different elevations, more rain than arctic and more sunlight.
